

FACTS ABOUT The New Jersey Licensed Site Remediation Professional (LSRP) Program

Licensed Site Remediation Professional

An LSRP is an experienced environmental consultant licensed by the State of New Jersey to perform environmental remediation and guide a person responsible for conducting remediation through the remediation process. LSRPs act as the State of New Jersey certified specialists to oversee the remediation of contaminated sites. The state environmental regulatory agency, the New Jersey Department of Environmental Protection (NJDEP), continues to inspect and review submissions, issue permits and enforce compliance with timeframes.

New Jersey created the LSRP program to increase the pace of remediation; reduce the threat of contamination to public health and safety, and to the environment; and return underutilized properties to productive use.

With few exceptions, anyone responsible for remediating a contaminated property is required to hire an LSRP. This includes but is not limited to:

- Industrial companies.
- Real estate developers.
- Owners of commercial properties.
- State and local governments.

Homeowners with heating oil underground storage tanks and federal government lead sites are not required to hire an LSRP. In certain circumstances, the NJDEP may retain direct oversight for remediation.

Requirements

An LSRP must know and apply the statutes, rules, regulations, and appropriate technical guidance concerning the remediation of contaminated sites in New Jersey. The LSRP's role is to guide the person responsible for conducting remediation through the process of remediating contaminated sites in accordance with the NJDEP's applicable standards and regulations.

Code of Conduct

An LSRP is responsible for meeting a strict code of conduct written into the Site Remediation Reform Act (SRRRA). LSRPs' highest priority in the performance of professional services is the protection of public health and safety and the environment.

The SRRRA statute also specifies responsibilities to the NJDEP and the responsible party. The LSRP Licensing Board has the authority to investigate complaints against an LSRP and discipline LSRPs who violate the board rules. NJDEP has the authority to enforce against persons responsible for conducting remediation.

their departures from guidance or regulations, and document that the remediation is protective of public health and safety, and the environment.

We have cleaned up tens of thousands of contaminated sites in New Jersey; some projects were already underway, but this program accelerated the process. In fact, there are more contaminated sites being actively worked on today than ever before because of New Jersey's Licensed Site Remediation Professionals (LSRPs) program.

Professional Judgment

The SRRRA requires that the LSRP comply with all remediation statutes and rules and consider NJDEP guidance when making remediation decisions. To perform their role effectively, LSRPs use their technical and scientific expertise and professional judgment throughout the entirety of the remediation process.

When there is no specific technical guidance issued by the NJDEP, or in the judgment of the LSRP the guidance is inappropriate or unnecessary to meet the remediation requirements, the LSRP may use additional resources such as: guidance from the United States Environmental Protection Agency or other states; guidance from organizations with acknowledged technical expertise; or other relevant, applicable, and appropriate methods and practices. In accordance with SRRRA, LSRPs document

An LSRP's highest priority in the performance of professional services shall be the protection of public health and safety and the environment.

Professionalism

LSRPs are held to the highest standards of professionalism. By statute, the LSRP Licensing Board may audit LSRPs for their compliance with the Site Remediation Reform Act. The Board also may evaluate that the LSRP has used standards of care and informed professional judgment.

Chaired by the NJDEP Commissioner or designee, the 13 members of the Licensing Board represent members of the business, environment, and academic communities with expertise in site remediation. Seven members of the board are LSRPs. Positions are nominated by the Governor and confirmed by the Senate.

Eligibility

To become an LSRP, an applicant must qualify to take and pass a rigorous licensing examination to test their technical knowledge as well as the rules governing remediation.

Qualifications include the following:

- ✓ Bachelor's degree or higher in natural, chemical, or physical science or an engineering degree related to site remediation.
- ✓ At least eight years of full-time professional experience in the field of site remediation and five of those years in New Jersey.
- ✓ At least 5,000 hours of relevant professional experience within New Jersey over the five years prior to the examination that indicates the applicant is competent to determine when site remediation is complete.

To maintain a license, the LSRP must complete 36 continuing education credits in each three-year license renewal term, which is a rigorous academic requirement by professional standards.

About the LSRPA

The mission of the New Jersey Licensed Site Remediation Professional Association, Inc. (LSRPA) is to further the Licensed Site Remediation Profession. This includes acting as an educational and technical resource; and assisting its membership to use standards of care and informed professional judgment when conducting the work of an LSRP in protecting public health and safety and the environment. With more than 800 members, including both LSRPs and others involved in site remediation, the LSRPA is a non-profit entity incorporated in the State of New Jersey, and is recognized by the NJDEP as a primary representative of the profession.
